Product requirements

- Project: HandyHearts Care Tech
- Document title: Product requirements
- Document ID: HH-PRD
- Version: 1.0
- Status: Final (as shipped)
- Date last updated: 2026-10-21 (UTC)
- Author: Cursor cloud agent, for Dondon (owner)
- Repository: https://github.com/Awkward8787/Handy-Hearts-Care-Tech
- Commit described: `d0bdd0c2d4d18144129d93fd37faf5033f96c98f`
- Live URL: none. This repository was not deployed. The public origin recorded in `public/sitemap.xml` and `index.html` is `https://hhcaretech.com`.

Summary

HandyHearts Care Tech lets a visitor request technology help for an older adult without creating an account. The visitor can request a consultation or book a service by leaving a name, an email or a phone number, the topic or service, a preferred date and time, and an address when someone is coming to the home. The product

returns a receipt with an order reference. Email and text confirmations are sent when those delivery services are configured. Staff and providers sign in on a separate internal path.

Background and problem

Families need someone to set up a phone, computer, television, printer, or home Wi-Fi, or to sit with an older adult who is learning a device. The previous code in this repository required a customer account, offered a public path that could create an administrator, and mixed a client-side assistant into the family portal. Dondon, the owner, required a different rule for this work and for this document: public customers of Handy Hearts must not need their own account, login, or private session. A visitor must be able to request a consultation or buy or book a service as a guest, with only the contact and booking details needed. Confirmations stay by email or text, plus a receipt. Staff sign-in, if it exists, stays internal.

The product name in the interface is HandyHearts. The owner’s wording in the request is “Handy Hearts.” This document uses HandyHearts for the product mark and quotes the owner’s wording only in this background.

Goals and non-goals

Goals

1. A guest can request a consultation without an account. Shipped. Implements FR-001.
2. A guest can book a service without an account. Shipped. Implements FR-002.
3. Every saved request has a reference and a receipt the guest can open again. Shipped. Implements FR-003.
4. Email and text confirmations are attempted when delivery is configured, and the receipt is still saved when it is not. Shipped. Implements FR-004.
5. A price is quoted only from a staff-entered rate whose name matches the catalog. Shipped. Implements FR-005.
6. Staff and approved providers can sign in and work assigned visits. Shipped. Implements FR-007.

Non-goals

1. Customer accounts, customer passwords, and a private customer session. Removed.
2. A family portal, a device wizard that requires a signed-in user, and a client-side assistant. Removed.
3. Inventing a legal entity, support email, mailing address, governing law, retention period, business time zone, platform-fee percentage, or service price. Those stay with the owner.
4. Deploying the site, submitting the iOS app, or charging a real card from this repository.

Success metrics

No analytics product is installed. Success for this release is observed manually:

Signal	Method	Target
Guest consultation saved	A `consultation_request` row or a file-store consultation, plus a receipt reference	No numeric target. UNCONFIRMED as a business goal.
Guest booking saved	A `service_order` row or a file-store order, plus a receipt	No numeric target.
Confirmation delivered	`confirmation_message.status = sent`	Depends on SMTP and Twilio, which are not configured in this repository.
Payment recorded	`payment_status = paid` after a verified Stripe notice	Only when Stripe is configured and a rate is on file.
Forced customer sign-up	Review of `/`, `/consult`, and `/book`	Must stay absent. Verified in `web/guestHome.test.tsx` and in the browser on 2026-10-21.

Audience and personas

Persona	Context	Need	Device	Comfort	Accessibility
Guest requester	A family member or the older adult, arranging help	Submit a request with the least information that lets someone call or write back	Phone or computer browser. iOS app is in the repo and was not run in a simulator here.	Varies. The form uses plain labels.	44px targets, visible focus, skip link, reduced motion.
Staff admin	Internal operator	See consultations and bookings, add rates, assign a provider	Desktop browser, `/staff`	Comfortable with a sign-in form	Same visual system.
Provider	Person who performs the visit	See assigned visits and move them from assigned to in progress to completed	Phone or desktop, `/staff`	Comfortable with a short task list	Same visual system.

Age ranges are not stored. The audience described in the home page is “technology help for an older adult.” A numeric age band was not supplied by the owner and is UNCONFIRMED.

User stories

US-001 Guest consultation

As a guest, I want to request a consultation with my name, a way to reach me, a topic, and a time, so that someone can follow up without my creating an account.

- Given I am on `/consult` and I am not signed in
- When I enter a name, an email or a phone number, a topic, and a date that is today or later, and I choose Request consultation
- Then I see a receipt whose reference starts with `HH-` and the page does not ask me to sign in

US-002 Guest booking

As a guest, I want to book a service, including an address for an in-home visit, so that the visit can be scheduled.

- Given I am on `/book`
- When I review the booking and choose Place booking
- Then a receipt is saved, payment is taken only when a quoted total is at least $0.50 and card payment is available, and otherwise the receipt says no payment was taken

US-003 Receipt lookup

As a guest, I want to open my receipt later with the reference, so that I still have the confirmation without an account.

- Given I have a reference
- When I open `/receipt` and submit it, or open `/receipt/HH-…`
- Then I see the same summary, or “That receipt was not found.”

US-004 Staff work

As staff, I want a sign-in that guests never have to use, so that I can assign visits and set rates.

- Given I have an approved admin profile
- When I sign in at `/staff`
- Then I can list consultations and bookings and assign a provider

Functional requirements

ID	Requirement	Priority	Status	Stories	Where
FR-001	A guest can submit a consultation with name, email or phone, topic, preferred date, preferred time, and optional notes. No account.	Must	Shipped	US-001	`web/pages/ConsultPage.tsx`, `POST /api/consultations`
FR-002	A guest can book a catalog service with the same contact fields, urgency, in-home or remote, and an address when in-home.	Must	Shipped	US-002	`web/pages/BookPage.tsx`, `POST /api/orders`
FR-003	Each saved consultation or booking gets a reference `HH-` plus 10 characters, and a receipt page.	Must	Shipped	US-001, US-003	`domain/orderReference.ts`, `GET /api/receipts/:reference`
FR-004	Email and text are sent when configured. The receipt states that a message was sent only when the status is `sent`.	Must	Shipped	US-001	`server/confirmationSender.ts`, `web/pages/ReceiptPage.tsx`
FR-005	A price is calculated only when an active service name matches the catalog label. Otherwise the total is 0 and	Must	Shipped	US-002	`domain/quoteBuilder.ts`

ID	Requirement	Priority	Status	Stories	Where
	payment status is `not_due`.				
FR-006	When the quote is at least 50 cents and Stripe is configured, the server creates a PaymentIntent and the browser can collect the card.	Must	Shipped	US-002	`server/payments.ts`, `web/pages/BookPage.tsx`
FR-007	Staff sign-in uses Supabase and is linked from the footer as Staff. The home page has no sign-in.	Must	Shipped	US-004	`web/pages/StaffPage.tsx`, `web/components/PublicLayout.tsx`
FR-008	A provider can apply at `/staff`. The application is not a customer account and is not an admin.	Should	Shipped	US-004	`web/pages/StaffPage.tsx`, SQL trigger
FR-009	An admin assigns a provider. A provider can start a visit and mark it complete. An admin can cancel a visit that is not completed or cancelled.	Should	Shipped	US-004	`server/createApp.ts`
FR-010	Privacy and terms pages explain the guest record, payment, and	Must	Shipped	US-001	`web/pages/LegalPages.tsx`

ID	Requirement	Priority	Status	Stories	Where
	the unpublished operator identity.				
FR-011	The services page lists the five catalog categories and a live rate only when the name matches.	Must	Shipped	US-002	`web/pages/ServicesPage.tsx`
FR-012	Unknown paths show “Page not found.”	Must	Shipped	US-003	`web/pages/LegalPages.tsx`

Non-functional requirements

ID	Requirement	Status
NFR-001	Web typecheck, lint, Vitest, and production build run in GitHub Actions on Node 22.	Shipped. `.github/workflows/ci.yml`
NFR-002	Touch targets use a 44px minimum (`.btn` in `index.css`). Focus is a 3px `#2563eb` ring.	Shipped
NFR-003	Text contrast: `#2563eb` on white is 5.17:1 (WCAG AA). `#1d4ed8` on white is 6.70:1. `#475569` on white is 7.58:1. `#047857` on white is 5.48:1 and is used for provider-application notice text. `#10b981` is a fill, not body text on white.	Shipped
NFR-004	`prefers-reduced-motion: reduce` shortens animation and turns off smooth scrolling.	Shipped. `index.css`
NFR-005	Security headers are set by Helmet. The content security policy is in HH-TRD. HSTS max-age is 15552000 seconds, without includeSubDomains and without preload.	Shipped
NFR-006	Guest POSTs are limited to 30 per 15 minutes, receipt GETs to 60, and `/api/staff` to 120, in production.	Shipped
NFR-007	Guest personal data is written by the server with the service role, or by the local file store. The browser anon key cannot list those tables.	Shipped in SQL grants. The migration must be applied by the owner.
NFR-008	Public pages have titles, descriptions, a canonical URL, and an Open Graph image. Staff, receipts, and the 404 are `noindex`.	Shipped
NFR-009	The production build of commit `d0bdd0c` splits the booking and staff pages. Measured sizes: main JS 255,285 bytes, booking JS 20,041 bytes, staff JS 237,887 bytes, CSS 25,364 bytes.	Shipped
NFR-010	English only. No other locale is shipped.	Shipped

ID	Requirement	Status
NFR-011	Browsers: current Chromium was used for the guest flows on 2026-10-21. A formal support matrix is in HH-TRD.	Shipped as far as that check
NFR-012	Card numbers are entered in Stripe, not stored by HandyHearts.	Shipped

NFR-009 was measured after `App.tsx` started lazy-loading the booking and staff pages. If that edit is in a commit after `d0bdd0c`, the measurement belongs to that later commit. The documents' changelog records which commit contains the split.

Content requirements

Page	Purpose	Key copy
`/`	Offer the two guest actions	"Request help without creating an account."
`/services`	Explain the five services	"A price is shown only when a rate is on file for that service."
`/consult`	Guest consultation form	"No account needed." Button: "Request consultation"
`/book`	Guest booking form	"No account needed." Buttons: "Review booking", "Place booking"
`/receipt`	Look up a reference	"No account is required."
`/privacy`	What a guest record stores	Operator legal name, address, and support email are stated as not published yet
`/terms`	Price rules and payment rules	Weekend 15%, same day $25, expedited $15, emergency $25
`/staff`	Internal sign-in	"This sign-in is for staff and providers."

Tone is plain. Customer pages do not mention environment variables, terminals, or setup steps.

Monetization or payments

The model is a one-time quoted visit, not a subscription and not an advertisement. Currency is US dollars (`Money.currency` is `usd`). There is no seeded price. A rate exists only after an admin adds a service whose name matches a catalog label: Device Setup, Fix/Repair, Learning, WiFi/Network, or Printers.

When a rate matches, the quote is `max(hours, minHours) * hourly rate`, and the hours used for a booking are the service minimum hours. A weekend adds 15% of that base, rounded to the nearest cent. The same civil day adds $25. Expedited (`medium`) adds $15. Emergency (`high` or `emergency`) adds $25. Same-day and emergency can both apply. If nothing matches, the receipt says the price is to be confirmed and no payment is taken.

Stripe automatic capture is used when the total is at least 50 cents and the server secret is set. The legal entity that receives the funds is UNCONFIRMED. Platform fee and provider payout are stored as 0. Refund copy is not published. Tax calculation is not implemented.

Scope by release

Item	Release	Status
Guest consultation, guest booking, receipt, staff desk	This repository	Shipped
iOS guest screens calling the same API	This repository, not compiled here	Shipped as source
Operator legal identity on the legal pages	Owner	Deferred
Analytics	Not chosen	Deferred
Structured device and accessibility fields	Removed from the guest form. Notes remain.	Removed from the running flow
Customer account	Owner decision	Removed

Assumptions and constraints

- The owner supplies Supabase, Stripe, SMTP, Twilio, the Apple team, and the legal text. This repository ships names only in the example env files.
- The business time zone defaults to `UTC` until the owner sets `BUSINESS_TIMEZONE` and `VITE_BUSINESS_TIMEZONE` to the same IANA name.
- Hosting for `hhcaretech.com` is not recorded as a verified fact in the current code. An older comment in the prior tree is not treated as a current hosting contract.
- No timeline was requested. This document does not estimate one.

Risks

Risk	Likelihood	Impact	Mitigation
A receipt reference is the capability to read a guest's contact details	Medium	High	The reference is 10 characters from a 32-character alphabet. Receipt reads are rate limited. The owner can add a second check later.
Legal pages ship without an operator identity	High until the owner publishes it	High for a public launch	Launch checklist blocks public launch.
Production starts without Supabase and without `DATA_DRIVER=file`	Medium	Guest writes return 503	Health reports `guestStore: false`. README states the rule.
A previously committed Stripe publishable key remains usable	Unknown	Payments or reputation	Owner rotates it. The value is not repeated here.

Stakeholders and approvals

Dondon is the owner and the decision-maker for the guest rule. This document records that decision. No separate written sign-off beyond the request in this task is on file.

Glossary

Term	Meaning
Guest	A visitor with no HandyHearts account.
Reference	Public id shaped `HH-` plus 10 characters. It identifies one consultation or one booking.
Receipt	The page and payload the guest keeps. It includes the summary and the payment line.
Catalog	The five bookable services in `domain/serviceCatalog.ts`. Consultation also offers "Not sure yet."
Staff	An `ADMIN` or `PROVIDER` row in `app_user`.
Priced	A booking whose service name matched an active rate.

Open questions

Question	Owner	Blocked until answered
Legal name, mailing address, support email, governing law, and retention period. UNCONFIRMED.	Dondon	Public launch of the privacy policy and terms.
Business IANA time zone. UNCONFIRMED. Code default is UTC.	Dondon	Same-day and weekend quotes for a real city.
Platform-fee split. UNCONFIRMED. Stored as 0.	Dondon	Provider payout amounts.
Whether a phone without + should assume a country. UNCONFIRMED. The code does not add a country prefix.	Dondon	Text delivery for national numbers.
Whether structured device fields should return. UNCONFIRMED.	Dondon	A richer intake form.
Who receives Stripe funds. UNCONFIRMED.	Dondon	Live charges.

Changelog

Date	Version	Change
2026-10-21	1.0	First final PRD. Customer accounts removed because Dondon required guest consultation and guest booking.
